"OKW/Chi Interception"

15 (AC)

CORRESPONDENCE BETWEEN OKW/CHI & INTERCEPT STATIONS ON THE INTERCEPTION OF DIPLOMATIC TRAFFIC

1. Attached are translations of correspondence between OKW/Chi and the intercept stations LAUF, TREUENBRIETZEN and TENNENLOHE, selected from part of the OKW/Chi archives.

2. This particular batch of messages was taken from a file registered as TICOM document T.804. They give a good insight into OKW coverage of world-wide diplomatic and civil traffic between 1939 and 1944. There are also a few references to the interception of Services traffic.

3. The messages are arranged chronologically within each of the following main sections:

1) U.S.A.
2) United Kingdom
3) Sweden
4) Italy
5) France
6) Miscellaneous Traffic and General Organisation.

4. Some of the correspondence naturally contains references to enclosures, appendices or earlier communications, etc., which are no longer available.

Traffic of the U.S.A.

1.

OKW Chi

Techn. Outstation Münster - St. Mauritz, 22/11/41.

Warendorferstrasse 263.

Techn. outstation wishes to know which wireless stations monitored by you send telephony, or at what times such transmissions are observed. For example on 21/11 at 1500 there were transmissions from stn. Rocky Point/USA wqv 14800 kcs and at 2120 hrs from stn. Lawrenceville wmn 14590 kcs, both in English and stated by Chi OKW to be important. For purpose of intercepting such transmissions the Techn. outstation would be grateful for observations made at your end.

To Fixed Intercept Stn. Treuenbrietzen
" " " Lauf

2.

23/12/41 To FSR Stn. Lauf, Signals Intercept Stn. Treuenbrietzen.

The wireless traffic still existing according to daily reports between Italy and USA and vice versa is to be most carefully monitored, not only message but also contact traffic, and included in daily reports with all data of importance. Encyphered and P/L messages intercepted are to be sent to Chi at once by T/P.

Chi. sgd. Strohmeyer, Major.

3.

OKW Chi Berlin 5/1/42.

E 17a/V

No. 91/42 Secr.

Ref. American transmitters monitored with difficulty.

Appendix 1.

To FSR Stn. Lauf.

Appended is copy of results of test of USA transmitters hard to intercept in Treuenbrietzen, for information and retention. ((No trace of Appendix)).

We point out that it is mainly a selection of those transmitters which are not regularly received badly, but only

at times or "Schichtweise". Quality of interception could not be completely investigated in the case of those underlined, as these had either no traffic at all or very little.

Ref. the last conference in Lauf of 16/12/41 the result of tests of badly received USA transmitters is to be sent by you also by 8/1.

p.p. [signature illegible].

4.

Berlin 19/1/42

Ref: Traffic Cairo-Washington

To FSP Stn. Lauf.

Intercept station Treuenbrietzen for information.

As complete as possible interception of messages sent between Cairo and Washington and vice versa is extremely important. For control reasons Intercept Station Lauf must also monitor this traffic with utmost care. Messages primarily of interest:

1) Cairo to Washington with addresses:

agwar Washington
milid "

2) From Washington to Cairo with address:

milattaché amlegation S.N.

All messages with these addresses are to be sent immediately to Chi by T/P; the originals are not to be sent on by post. The diplomatic address list is to be correspondingly completed in Column 1.

Kempf.

E No. 122/42g To Chi OKW V

Berlin

Ref: Wireless traffic Egypt.

We submit below a list of allocation of transmitters and operation of receivers of inter-state wireless traffic Egypt.

The following transmitters were allotted to the receiver groups :

suc	2151	suy 2	2454
sup 2	4785	sur	4425
sus 2	4208	suw	2519
suu	2172	suv	2984
sux	3821	suy	3834
suz	2169	sux 2	1792
sus	1526 m	suz 2	4365 m

The transmitters underlined, mainly in traffic with USA, are being monitored continuously by high speed automatic receiver, to ensure complete interception.

The transmitters are allocated to 14 receiver groups.

For constant observation of this traffic results are exchanged daily with Treuenbrietzen.

11.

31/7/?42 1438 To FSR Stn. Lauf.

Supposed to be American tx, 200 to 300 watt working in Tangier on about 4420 m to Lisbon and Casablanca. Traffic time 15 minutes after the hour and around 13 hours. Same transmitter has traffic with America on about 20 m wavelength. Frequent change of callsigns. Carry out special monitoring.

Chi OKW

[Pencil note] Monitoring ceased on 8/8 by telephoned orders Ib.

12.

4/9/42 1238 To FSR Stn. Lauf. Secret.

As learned from cypher messages intercepted by other stations wireless stations "war, wvna, wvnt, geh 2" in American wireless traffic are sending a large number of 5/L messages with indicator "nicit, fawof and dapuj" (at beginning and end). As considerable value is attached to the interception of these messages, you are ordered to monitor the wireless traffic of these stations continuously.

The FSR Stns. Treuenbrietzen and Lauf are to arrange at once with each other which wireless stns can be taken over by each FSR Stn for continuous monitoring. Result of arrangement arrived at and manner of carrying out the continuous monitoring is to be reported to this end.

Chi. OKW

13.

Chi. 18/9/42

To FSR Stn. Lauf

" " Treuenbrietzen.

The callsigns WAR, WVNT, WVNV and WVNA are to be added to the list of callsigns and frequencies of international wireless stations as at April 1940, OKW Az. E 15a, 1 St b WNV/ Chi No. 2647/40 secret of 12/6/40, under "United States".

From the 4 networks with principal stations WVNA, WAR, GEH 2 and WVDB only the following are to be monitored continuously as far as possible in future:

WAR - Washington
WVNV - Cairo
WVNA - Karachi
WVNT - Asmara

and moreover with the addresses AMSEG, AMSME and AMSIR and with the indicator groups "NICIT" and "BAGYW". Signatures: Maxwell and Hodges.

The other traffic in these networks is only to be monitored at random intervals to see whether messages with the addresses mentioned are occurring.

[signed] Kempf.

[Pencilled note by Major Wend].

Conversation with Herrn Amtmann Klinger 21/9/42 1530: the instruction does not mean that only messages from these transmitters which have both the above 3 addresses and the indicator groups are to be intercepted. It is merely intended to stress the particular importance which Gr. IV attaches to this combination.

Everything from these transmitters which would otherwise be wanted according to the address list is to be intercepted.

W.

YTAYTD not audible here in traffic with America, as probably 20 m band. Existence of traffic known here for a long time; sends 5/L messages with 4-place indicator figure in preamble. American answering stations: WPK on 13840 kcs, WDQ on 7625 kcs, EEE on 6920 kcs. If any results at your end, request details of frequencies and times, as traffic can be read here.

Cdr. Sigint 4th Sect.
W. No 1873/43

19.

Control on monitoring line Cairo-Washington
Period 1st-31st Jan. 44.

Address: Secstate Washington.

From the evidence of the diplomatic numbers 210 messages were sent during period monitored.

Of these 121 were intercepted a result of 58%.

It is probable that the large number of missing messages is due to the Egyptian stations' Multiplex transmissions. We point out also that in comparison with earlier months the intercept result is still favourable.

The messages intercepted were as follows:

P/L messages	15
Cypher messages	106

Of these 105 went direct from Egypt to USA and were intercepted by Lauf on following stations:

sup 3	70
suv	15
sur	12
suy	7
sup 2	1
su	105

Chi IIIb contributed one message on sux 2 on beamed route Egypt-Great Britain on multiplex.

Chi Ib1 8/2/44.

20.

FSR Stn. Lauf, 7/2/44

No E 49/44 Secret.

To OKW Chiffrierabt, Berlin.

Ref: Completness of interception of USA traffic Berne-Washington.

The check on diplomatic numbers as carried out here cannot prove 100% interception of the lines, because there are always a number of messages with interesting address (in particular Secstate Washington) sent without diplomatic numbers.

For sake of interest, to obtain exact proof of work of outstation Lörrach, this unit has had a check carried out for January of all postal numbers with addresses (thus including otherwise uninteresting addresses). In the postal number series "szs" outstation Lörrach has according to the numbering, commenced afresh each week, intercepted all messages sent.

It is true that other number series were used during January beside "szs" in which however only a small number of diplomatic messages passed. In any case, of 640 messages having gone according to diplomatic numbers with address "Secstate Washington", 599 appear in the number series "szs".

As the most important number series szs is proved to have been 100% intercepted, we may conclude that the other number series of lesser importance, running parallel to the main series and intercalated with the messages of the main series, have been completely intercepted.
This unit assumes that this demonstration will be of interest to you also.

1 app. W, Major and Head.

FSR Stn. Lauf.

No 61/44g

Ref: Chi No E 14a I (Ib) No 489/44g.

Ref Wireless traffic Egypt.

To OKW Chi I (Ib)
Berlin.

The traffic to be monitored here according to above reference letter can be intercepted well in the B and C monitoring ordered by reason of signal strength and reception. In B monitoring the tx. suc, sup 2, sup 3, sur, sur 2, suv, suw, suy, suy 2, suz are operating, of which sup 3, sur and suv carry out the main traffic for sending diplomatic messages.

As reported earlier, most of the tx. work in multiplex traffic with USA and England with interruptions, and it is to be assumed that a large number of diplomatic messages are sent in this traffic. A further reason for this are the former interception figures before the tx. were set to multiplex working. At that time the monthly average was 1000 messages intercepted.

See below present state of Egyptian tx. ascertained here this month, their traffic times and type of traffic.

Tx.	Fqcy.	Traffic Time	Note
suc	2152	0700 - 1900	only multiplex
sup 2	4782	1700 - 0700	" telegr.
sup 3	2165	1200 - 2000	" "
sur	4425	1400 - 0900	partly multiplex
sur 2	2978	0900 - 1300	only telegr.
suv	2984	0600 - 0100	partly multiplex
suw	2519	0800 - 1900	only telegr.
suy	3834	2000 - 2400	partly multiplex
suy 2	2454	1500 - 2000	only telegr.
s'x 2	1792	1100 - 1800	mainly multiplex
suu	2172	1000 - 1700	" "
suz	2169	1100 - 1900	" "

In addition to the Egyptian Tx. we report that also a few USA tx. are in multiplex in addition to normal telegraphy tfc. These are :

wej	4451	2300 - 1000	partly multiplex
wel	3352	2000 - 1200	" "
wem	4054	1900 - 1300	" "
wev	3881	2000 - 1100	" "

(2)

Chi OKW Berlin 20.10.1939
File E 14a
Nr.2912/39 secret

Subject: Interception of English cypher messages (5 figure)

To Intercept Station Tennenlohe

Tennenlohe b/Erlangen

With reference to communication of Chi OKW of 10.8.1939 Nr.2912/39 secret, attention is once again drawn to the fact that no English cypher messages transmitted in figure groups are to be intercepted. These messages are recognizable by the word "prodrome" in the message preamble. It is not necessary for an English wireless station to appear as transmitter or receiver, i.e. message Nr. 1740 of 12.10.39 1250 hours, receiver V/S. On the other hand all English messages encyphered with letter groups, likewise recognizable by the word "prodrome" in the preamble, are to be intercepted. Special importance is attached to the messages from tac and taf.

Traffic between the Royal Air Force wireless stations
gjf Air Ministry London
gfx Ismailia (Egypt)
gfv Baghdad
gfz Calafrana (Malta)
geo Singapore
gfq Aden

is not to be covered in the future since it is already intercepted by the G.A.F. (e.g. Day report Nr.57 of 16.10.1939, receiver VIII/K, page 2).

(signed) Kempf.

To Intercept Station Tennenlohe

Tennenlohe b/Erlangen

It appears from the preamble of the above-quoted wireless message that heavy traffic on the line hzn-ode is often monitored.

Since the messages transmitted to and from Transjordan are of great interest they are all to be intercepted until further notice and are to be sent to Chi OKW.

(signed) Kempf.

---

(4)

Chi Berlin 16.4.1940.
File: E 14 a V
Nr: 1731/40 secret

Subject: Special Monitoring - 1 enclosure.

To Intercept Station Lauf
Intercept Station Trebenbrietzen.

It is reported by a reliable source that diplomatic message traffic exists between the English embassy transmitters at Bucharest and London and is carried out in accordance with the traffic times and procedure given in the enclosed appendix.

Attempts are to be made, within the framework of the search service carried out there, to monitor this traffic under the call-signs and frequencies quoted and intercepted messages are to be sent immediately to CXW Chi by teleprinter.

(signed) Kempf.

---

(5) Enclosure to "Day Book 347/40"

Times of traffic and procedure of the English transmitters said to be at Bucharest.

Two transmitters, the locations of which as Bucharest are uncertain, operate in the English diplomatic special network. The traffic given under 1) is the most likely one, however.

1)	Callsign	Frequency	Times of transmission
	701	14880 kcs	1100 - 1130 1600 - 1630 1900 - 1930

and under the same callsign with frequency 6920 from 1900 to 1930 and at 2245 hours.

2)	Call-sign	Frequency	Times of transmission
	902	13540 - 13610 kcs	1100 - 1130 1900 - 2000
		6770 kcs as alternative frequency.	

Only one call-sign is used namely 701 by the first station and 902 by the second station. In this figure the second digit may be altered from 0 to 5 and indicates the qsa particulars. In place of the q group abbreviations of 2 figures are used, e.g.

64 = qrx
68 = vvv
72 = qtc
73 = qru

Example of traffic

vvv 701 or 711,721 etc = number 23 gr 22 (Groups of 5 figures follow).

Zonal time

In order to ascertain the correct time of a traffic appointment the following procedure is to be effected:- if the agreed time is given as 1/4, 1/2, 3/4 or exact hour add one hours to obtain Central European Time - for instance - qrx 0530 hours, i.e. call again at 0630 hours central European time.

If the time appointed is at other parts of the hour. 35 minutes are to be added in order to obtain central European time - for example qrx 0625 - call again at 0700 hours central European time. For purpose of camouflage both times are often employed in one call.

Intercept Station Lauf
Nr. 822/40 secret

Lauf, 5.9. 1940

To Chi Stelle OKW
Gruppe V
Berlin

Subject: Prodrome messages

The latest instructions for these are:-

a) Figure messages are not to be taken
b) Letter messages are to be taken even if they are mixed with figures.

In order to have a full explanation of the question of when a Prodrome message is to be regarded as mixed in this sense, 4 examples of messages are forwarded:

Example 1: 5 letter-groups at the beginning only, 24 figure-groups
" 2: 10 letter-groups at the beginning, 60, figure-groups
" 3: 9 letter-groups at the beginning, 3 letter-groups at the end and 73 figure-groups inbetween
" 4: Letter-groups, plain language, figure-groups in roughly the same proportions.

The view here is that examples 1 to 3, where in relation to the preponderance of figure-groups there are only a few letter-groups which obviously deal with the address and signature, are not mixed messages in the sense of the instructions and are, therefore, not to be taken. This type of Prodrome message is frequent, purely figure Prodrome messages appear very seldom.

In the category of example 4, where letter and figure-groups are evenly balanced, messages have recently appeared in individual cases of a type in which, in the case of lengthy messages, a complete page of letter-groups was introduced or appended. These messages only are regarded here as "mixed" in the sense of the intercept instructions

Subject: Unidentified wireless traffic from glk
1 enclosure (taken automatically)
1 enclosure (taken by magnetophone)

The international transmitter glk (Dorchester) has been identified for some days in traffic with stations wem, whr (Rocky Point) on a wavelength of 37.58m in an unknown wireless system.

W/T transmissions take place daily from 0090 [sic] hours to 1100 hours; the signals are sent with automatic keying in an unrecognized form.

These signals can be taken perfectly on the undulator but are not readable, however, on account of their type. The complete signals consist of 1 to roughly 25 elements, occasionally commencing with one short signal.

Normal morse procedure is used in contact traffic

Example: ny de glk
xq wem de ln - 1015 bst zsu I/r st 578
wtg for whr +

The following are enclosed for further study:

1) a magnetophone intercept with reception speed 8
2) a similar intercept by morse undulator

E 2, day book Nr.852/40 secret

To Chi Stelle CKW
Gruppe V
Berlin

Reference: Addresses - 4 enclosures

Wireless messages in the English international traffic have recently been intercepted which have the same contents in spite of different addresses. In accordance with the list of addresses and the supplements to it only a limited number of them are to be intercepted, the majority are not.

The diplomatic addresses concerned are:-

Prodrome	London	(to be taken)
Puckish	London	(" " ")
Bedrock	Gibraltar	(not to be taken)
Fairmiss	London	(" " " ")
Placqes	London	(" " " ")
Humdrum	London	(new address)

As a further explanation, some messages with the above mentioned address are sent herewith.

Enclosure 1: Prodrome London = Bedrock Gibraltar
" 2: Bedrock Gibraltar =Fairmiss London
" 3: Humdrum London = Bedrock Gibraltar

The addresses Puckish London and Placqes London appear in the same combination.

Enclosure 4 has the same contents with address British consul and Britain luanda of which the first is sent in advance by teleprinter and the second not.

The point of view here is that the importance of the individual messages must be the same.

(signature illegible)

(Trns: following written in pencil)

Telephone answer Major Hohmeyer 25/9/40 - 1045:

The addresses prodrome, puckish and Britain luanda only are of interest. All other addresses are to be put aside even if cypher contents correspond with those of the above named addresses which are to be taken.

To Intercept Station Lauf

For information to Intercept Station Treuenbrietzen.

The following explanation is given of the unidentified wireless traffic from glk together with the return of the data forwarded to us:-

The analysis of the enclosed morse strips and magnetophone films resulted in a solution which is described in the enclosure.

Transmitter glk has been operating from time to time with this type of telegraphy since 1938. At Chi/III traffic with South Africa, North and South America had previously been identified. More detailed inquiries concerning the individual traffic links are now being made. Monitoring of the contents does not take place at Chi/III (b).

The system is a Three-Channel System in which up to 3 telegrams may be sent on one frequency in accordance with an agreed key. So long as only 1 telegram is sent, that is only one channel is used - and that appears to be the rule - decypherment is possible without special apparatus and with a little practice the direct reading-off from morse strips can be carried out by a good wireless operator without difficulty.

If 2 or 3 telegrams are sent simultaneously - such a case was not realised at Chi/III (b) - decypherment is more difficult.

An apparatus has not been developed up to now since there was no demand for it although the problem in itself has been technically solved.

(signed) Kempf.

Enclosure 3

Solution of the System

Dots on the strips have no signification
Dashes have the signification of dots
Pauses have the signification of dashes.
The space between letters is represented by 2 or 3 dots and the space between words by several dots.

Lauf, 18 October, 1940

File: 962/40 secret

To OKW, Chi Gruppe V
Berlin.

Subject: English transmitters.

With reference to today's telephone conversation with Herr Major Strohmeyer the English short-wave transmitters which are listed below, can no longer be intercepted here between approximately 2200 hours and sunrise owing to fading. It is nevertheless certain that diplomatic messages were included in these transmissions so that a considerable loss of such messages is entailed.

It is suggested that the advanced wireless intercept station Munster, now on the coast, be requested to make an attempt to discover the reception conditions for these stations during the period stated in order that suitable conclusions may be drawn from them.

List of the English transmitters concerned.

Lauf, 24 Oct. 1940

Nr. 979/40 g

To Herr Major Stanzel
O.C. of the Fixed Intercept Station TULLN.

Subject: English Transmitters.

With reference to the private letter of the undersigned O.C., a list is appended of the transmitters in question which, as a result of continually increasing fading, can no longer be picked up here from 2200 hours to sunrise. It is assumed that these can be more completely intercepted at a greater distance from England. Perhaps the possibility exists of making a sample test of the receptability of these transmitters there during the hours of the night in question, either in TULLN or at an out-station whereby value is attached to chance tape-reception. Attempts were made at Strasbourg ahd Husum in the meantime but without success. Results are expected here either by closer proximity to the coast or from a greater distance.

List of the English Transmitters concerned.

Intercept Station Lauf Lauf, 9 Dec.1940

To OKW Chi Section, Gruppe IV
Berlin

Subject: England/U.S.A.

Coverage instructions are requested for the enclosed 5-letter messages with the address "Mideast" and signature " "Troopers".

According to the list of addresses "Mideast" is not to be covered, recently, however, a large volume of 5-letter messages (previously more 5-figure) has been established with the signature "Troopers" which as an address is to be covered.

Two such messages have been sent to you without any covering note by early post on 9th Dec.

Since messages with addresses, which according to the list, are not to be covered, e.g. "Milwestaf" are frequently appearing with the signature "Troopers" with the same type of message the clearest instruction for the wireless operator would be to order -" all 5 letter messages with signature "Troopers" are to be recorded". Or should this be extended to 4 figure and 5 figure messages also?

Chi Berlin 16.12.1940
File: E 14a V
Nr: 6338/40 secret

Subject: England/U.S.A.
Reference: Your Day-Book Nr.1137/40 secret of 9/12/40 - 11 enclosures.

To Intercept Station Lauf

Chi/IV takes the following attitude to the above named query:-

"5-letter messages with the address "Mideast" are not to be intercepted since these are received in large numbers from other stations. Chi/IV would be more usefully served if, in their place the American 5-letter messages were intercepted by several receivers since the 4 messages enclosed herewith which are important could not be evaluated owing to the large number of errors in reception.

In future only the 5-figure messages of the English "troopers" messages are to be taken.

Nr: 620/42 secret

Subject: "Multiplex" wireless system

To Intercept Station Treuenbrietzen
for inf.to " " Lauf

It has recently been established that the "Multiplex" system is used, on a considerable number of English wireless links and American, too, to a certain extent.

The single-channel and multiple-channel systems are to be distinguished. The latter is used at the present time on the wireless links between India and England and similarly between England and U.S.A. Special apparatus is necessary in order to read the multiple - channel system but which is not, however, available for Intercept stations until further notice.

On the other hand the single-channel system of which the Malta wireless traffic (v.p.t.) is available may be read without difficulty. As an explanation of this system an experimental intercept with the corresponding interpretation of the letters is, therefore, forwarded herewith. By the use of this new method of reading-off it is possible in future, to read the wireless messages transmitted by v.p.t. Malta without further trouble. Corresponding measures within the framework of the given plan of duties, are to be put into effect immediately and the intercepted message material from Malta is to be sent to Chi.

(signed) Kempf.

SECRET

Experimental Reception Vpt (Malta)

1) In this system dots are represented as strokes. The length of the strokes denotes the number of dots.

2) The dashes are represented as divisions in which the length of the divisions again indicates the number of dashes.

3) Spaces between letters are indicated by two dots, spaces between words consist of four dots.

4) To sum up it may be said that the upper lines represent dots and the lower lines dashes in which dots and dashes are both of the same length.

(28)

F.S.R. Station Treuenbrietzen

Nr. VII/1636/42 secret

To F.S.R. Station
Lauf.

Subject: Multiplex Wireless System (Single Channel system)
Reference: Enquiry by phone by Chief Intercept Operator.
(see also communication Chi.E.14a V Nr.620/42
secret of 31.1.42).

The transmitter vpt - Malta having used the Multiplex system in wireless traffic for some time, the British transmitter gno = Ongar has now appeared with this wireless system also. Both transmitters are operating message exchange traffic, the volume of messages at the present time is, however, slight especially of messages to be taken (see M.B May 42, Treuenbrietzen). In addition vpt frequently gives dots only while gno is continually jammed at the present time by other British transmitters - presumably internal transmitters.

The interception of Multiplex traffic is not possible with the Hellschreiber since the symbols appear completely distorted. On the other hand this traffic can be intercepted and read without difficulty with the Reichard-Schreiber, which the unit is employing here, provided that the transmitter is heard without interference.

The Reichard-Schreiber makes the usual morse symbols in curves, as you know, whereby the symbols are of varying lengths as with the Hellschreiber. Dots and dashes are immediately recognizable by their different lenghts.

The single channel system, however, appears on the Reichard-Schreiber with completely changed symbols.

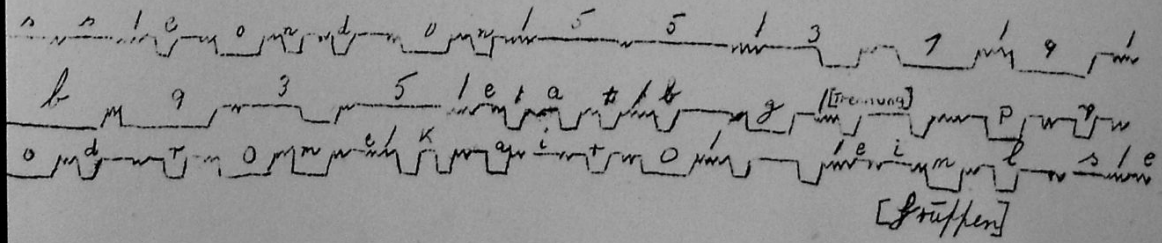
1) The dots are represented as strokes in this system.

2) The dashes are represented as divisions in which the length of the division indicates the number of dashes.

3) Spaces between letters are indicated by two dots (rather indentations), spaces between words consist of four dots (indentations).

4) To sum up it may be said that the upper lines represent dots and the lower lines dashes whereby dots and dashes are of the same length.

See the following example: (-length of symbol E or T)



It is advisable when intercepting this traffic to adjust the Schreiber so that the indentations, drawn from top to bottom, extend only to the middle of the strip measured from the upper line from which the dots are to be read to the lower line which contains the dashes.

The person reading off must determine the length of the unit before commencing to read, i.e. he must measure the shortest symbol (E) on the upper line contained within two indentations or determine the length of the shortest (i.e. the same length) symbol (T) on the lower line. All other symbols can be found from the length of this unit.

An experienced reader recognizes immediately whether it is a cypher or plain language text since the four indentations appear as group separator at regular intervals while the indentations when word separators naturally appear at irregular intervals.

Repeat of the above text:

SG London 55 31 9 0935 etat bg - prodrome cairo - cimsl e (etc)

w = letter separator
ww = group on word separator

Teleprint

To FSR Station Lauf.

It is reported from a reliable source that wireless traffic (secret transmitters) takes place daily from 17 to 18 hours, Swedish time, from Stockholm to ? Bucharest and vice versa. Stockholm uses the call-sign a1p, frequency 2000 kcs and 7300 kcs (frequency 7300 was not clearly indicated). The interception of this traffic is to be undertaken by both stations immediately and the results are to be reported to us.

OKW Chi.

Section 4

Italian Traffic

1.

Chi OKW Berlin 12/10/39

To Intercept Stn. Tennenlohe

W.i.e. the following traffics are to be monitored and the results (cypher messages) to be sent to Chi OKW by T/P. Particular value is attached to all messages with the signature "Auriti" (Ital. Ambassador Far East).

ibf. (33.09 m) to ixp)
ixp. (39 m ?) to ibf) main traffic time 1900-2200 hrs.

irl. (15.26 m) to jnq 2)
jnq 2 (15.84 m) to irl) " " " 0000-2400 hrs.

Kempf.

2.

I.Stn.Lauf 11/1/42

To Chi OKW Gruppe V

Ref: message transmission Italy.

A schedule of message interception in wireless traffic Italy with Far East, Balkan states and Tangier from December 41 to 8/1/42 is appended.

The traffic mentioned continues to be monitored without reduction, same allocation and personnel.

Operators state, and the schedule shows, that decrease in messages sent compared with December is mainly in traffic Italy-Far East and vice versa.

Many messages which cannot be intercepted however are sent on this line, such as maristat roma, marina roma and others.

In traffic Italy-Tangier station iqc (Tangier) is not heard here, as it works on a frequency not yet ascertained by us.

In general wireless traffic Italy is greater in December than in preceding month.

---

3. Lauf 23.4.44.

FSR Station, Lauf.

Chi OKW, Gruppe Ib
Herrn Amtmann Klinger
Berlin

Sugject: Italian international wireless traffic

The following transmitters are monitored here in the Italian international wireless traffic.

			Traffic with:
Ran Torrenova	ire	6300 m	Portugal, Germany, Hungary, Switzerland, Bulgaria, Sweden, Turkey, Rumania.
" "	irs	33.10 m	Japan
" "	irt	45.79 m	Japan, China, Sweden, Denmark, Germany, Hungary, Bulgaria, Portugal, Switzerland, Turkey.
" "	irx	24.96 m	Japan, Deutschland
Barcelona	iga	34.01 m	
	"	56.48 m	Italy, Teneriffe
Teneriffe	igb	28.20 m	Barcelona
Naples ?	ica	22.66 m	USA
"	"	32.98 m	
"	"	44.02 m	
?	icb	24.94 m	USA, England

The last two transmitters, in the area occupied by USA troops, are used only for the Press service and for the transmission of private messages.

The transmitters irs and igb very seldom operate. The diplomatic messages are in plain language with the exception of the Japanese messages to Berlin or sent to Tokio via Berlin and they are comparatively very few and have greatly diminished in the last month.

So far this month 12 plain language messages from ire and irt have been intercepted of which only 2 were transmitted with the address "Italdipl Berlin" to Berlin.

Section 5

French Traffic

1.

Chi OKW Berlin 12/9/39

Ref: Interception.

To Intercept Stn. Tennenlohe

Encyphered messages from various reliable sources have been received here, the contents of which are extremely valuable. The following wireless traffics, not monitored by you up to the present are concerned:

Traffic	Callsign	Time	Address	Signature
Stockh.-Paris	sav-fye saz	1930	Diplomatic Paris	Maugras
Oslo-Paris	lct-ftq	1605	"	Bruère
	lcj-ftl	1941		
		2030		
Paris-Buenos Aires (Morocco)	fce-lci	2335	Ambafrance BA	Diplomatic

Tokio-Paris details not yet available

In view of the importance of messages obtained from these traffics by other sources, every effort should be made by you also to intercept this message material - as far as possible encyphered - and sent it to Chi OKW by the speediest route.

Kempf .

N.b.

Frequencies were not given.

2.

5.10.39.

Chi OKW

Ref: Interception.

To Intercept Stn. Tennenlohe.

Below are given various international wireless traffics the interception of which is of great importance as regards encyphered message contents:

Tokio	Fyc - fze 19m	1336)	Intercepted by Treuenbrietzen
		1412)	only at beginning of
	jun - ftd) 15.7m	1245)	August 1939.
	fzd)	1259)	
		1320)	
		1450)	
		1518)	

(more precise details not possible). During September many good intercepts from Gamba.

Balkans	Paris-Bucharest	ftl-odb	1405	
		fzo-odg	1320	
		fze-odb	1400	
	Paris-Belgrade	ftl-ytc	1510	
		ftr-yta	1415	Budapest
	Belgrade-Paris	yta-ftr	1820	
	Sofia-Paris	lzb-har	1305	intercepts.
			1905	
	Athens-Paris	ytm-ftr	1930	
		yta-ftq	2200	

Further, Chi IV reports that isolated cypher message intercepts

Sofia-Paris	lyb-har	40.20 m	1250
	lzb		1949
			2331

are good, but that intercepts of cypher messages on

Budapest-Paris	hat2 - fyn	44.86 m	1330
			1500
			2035

made by you are very unreliable.

3.

Chi. Berlin 15/3/40

Ref: French Naval traffic

To Intercept Stn. Lauf.

In letter Chi Az. E. 14a V No 555/40 secret of 2/2/40 in para 2) orders were given that messages with following addresses or signatures: "amiraute' française; marine djibouti; marine diegosuarez" were no longer to be intercepted, as Chi IV was no longer interested.

The French stations for international traffic (principally Paris "tyc") also send Naval cypher messages, the contents of which are of great value for SKL (Marine).

As the monitoring stations of the Navy only monitor the purely naval wireless stations, the intercept stations are instructed to take the French naval traffics sent by international transmitters as far as monitoring permits. In no circumstances should the interception of international diplomatic messages be restricted.

In addition the P/L messages sent from the Vatican (hvj) should no longer be intercepted, as most of them contain only congratulations and blessings.

TOP SECRET

TICOM/D-69

4. -43-

Chi. Berlin, 14/5/40.

Ref: Traffic Beirut - Paris

To. Intercept Stn. Lauf.
Madrid for information.

We are very interested in wireless traffic Beirut-Paris and vice versa. it has been assigned to Stn. Lauf and Special Party Southwest for constant monitoring and has yielded some good results. However, complete interception of the numbered messages has not been possible, doubtless owing to atmospheric interference, fading or other causes; sometimes a gap of 14 days in messages has occurred.

We therefore repeat instructions to monitor this traffic especially carefully in order to obtain as complete message interception as possible.

Observations of interference or other causes making message interception impossible are to be reported to Chi/OKW Gr. V.

Kempf .

5.

Chi V Berlin 11/11/40

Ref: French secret transmitter

To Intercept Stn. Lauf
" " Treuenbrietzen.

It is reported from a reliable source that the colleague of the French military attaché Jean Collette is using a secret transmitter with which he radioes to Vichy. The following data are given:

Wavelength 38-42.
Transmitter correct: 40 m
Crystal
Callsign(s) unknown.

Monitor transmitter in question in your search duty and if any facts are ascertained report them by T/P to Chi OKW.

6.

Chi I Berlin 10/12/40.

Ref: French P/L messages.

To I Station Lauf
" Treuenbrietzen

In connection with the conference of heads of intercept stations the directives given there concerning the above matter are sent on in writing:

All French P/L messages of military, political and economic content are of importance for the wako and units of the OKW.

Of especial importance:

a) Message traffic between Vichy and overseas possessions concerning:

Announcements,
Remittance of funds for the possessions,
Appointments, promotions, pensioning of officials and armed forces,
General requirements of home country and of colonies, commerical matters,
Shipping, commandeering of ships,
postal, telegraph and wireless traffic,
military details of units, troop movements and fighting activity (Dakar, Gaboon, Indochina),
demobilisation, releases etc., press and broadcast propaganda.

b) Traffic between de Gaulle and his supporters in London and Africa (incl. Belgian Congo), including proclamations, press reports etc., sent by wireless.

of little importance is traffic concerning passport and visa matters. Here we are interested only in names and nationality of those concerned.

of no importance is all private traffic (congratulations, enquiries after health of persons, except high ranking officers and government officials, money remittances, and the like).

To relieve the T/P lines only French P/L messages of especially important contents are to be sent to Chi OKW by T/P. For instance your T/P's WHL no. 1135, 1136,1137, 1138,1148,1149, of 9/12/40 were unimportant.

Kempf.

7.

Chi V Berlin 11/2/41

Ref: Replacement of wireless telegraphy link Roanne - Kaunas by link Roanne - Riga.

To Intercept Stations Lauf, Treuenbrietzen.

At the request of the U.S.S.R. and to improve wireless telegraphy links, the link Roanne-Kaunas will be replaced from 1st February onwards by the link Roanne-Riga. The French administration has given its assent to its correspondent's proposal for traffic Roanne-Riga daily with exception of Sunday from 0830-1930 GMT, every hour for 30 minutes from 30 minutes past to the hour.

Kempf.

8.

Chef HNW/Intercept Control Station Berlin, 20/2/41.

Ref: Interception of French colonial wireless traffic.

Fixed I. Stn. Strasbourg has the job of monitoring and evaluating exclusively the French army and air force wireless traffic between France and the colonies and within the colonies. Obviously colonial and diplomatic traffic is not intercepted by Strasbourg. It is therefore not advisable to distinguish the the assignment of tasks of Strasbourg and Lauf.

Station Strasbourg sends the last 3 I reports on loan to Stn. Lauf for perusal.

9.

To I. Stn. Lauf. 12/9/41.

It is learned from reliable source that direct international wireless link between Syria and Iran (Teheran) has been opened since 4/9/41.

10.

Chi V Berlin 19/11/41.
Ref. Special Assignment.
To Intercept Station Lauf
" " Treuenbrietzen, for information.

An Army I Station has discovered in monitoring military traffics a wireless link also sending purely diplomatic messages with important contents. This is the Army wireless traffic between flz (Tientsin) and fag (Vichy War Ministry) which in the present instance was sent around midnight on wavelength 50 m. Address of message was: Diplomatic Vichy, signature: Cosme (French ambassador in Peking).

As far as possible this traffic is to be monitored and messages with the above address and signature to be sent by T/P to Chi OKW.

Kempf.

11.

Chi V Berlin 27/12/41.

Ref: traffic Roanne - Brazzaville

To I Station Lauf,
" Treuenbrietzen for information.

1 encl.

French note No. 29721/EM/Tr of 7/12/41 with callsigns and frequencies Lyon-la-Doua, Croix d'Hins and Brazzaville is appended.

There is no official traffic between Roanne and Brazzaville, but only a personal one for the exchange of private communications from relatives at home and in Africa. The French government desires to maintain this traffic, as important deductions may be made from these items of family news.

The German Armistice Commission has given the French delegation permission to continue the traffic, in order to make deductions itself about the de Gaulle movement.

The wireless traffics specified are to be monitored and results sent to Chi.

Kempf.

Section 6

Miscellaneous Traffic and

General Organisation.

1.

Chi OKW Berlin, 10/8/39.

Ref: Directives for monitoring

To Intercept Station Tennenlohe, Tennenlohe
near Erlangen

In order to make best possible use of wireless receiving sets and personnel available, Chi OKW will continually issue directives showing which international traffics are considered of special importance. Encyphered messages are to be given special preference.

The following are the international transmitters whose messages are to be intercepted until further notice:

1) Warsaw
Cracow
Radom

2) Paris

3) London

4) Rome

5) Ankara

6) Bucharest

All diplomatic cypher messages from the above transmitters are to be intercepted where possible, with the exception of messages sent to Russia, Japan and China; those sent to and from England in figures are not to be intercepted, but those in letters are to be.

7) Also of importance are encyphered messages sent from N. America.

8) From South America only cypher messages from Argentine, Chile and Mexico are to be intercepted.

9) As soon as the League of Nations Council assembles in Geneva, which will probably be in September this year, all cypher messages sent from Geneva will be of value.

The callsigns and frequencies required to intercept individual transmitters are to be taken from the Traffic Report of international wireless stations of 10/7/39. In addition Chi OKW is preparing a report giving further details of frequencies, callsigns, message addresses and principal traffic times, which will be of use in speedy identification of the most important diplomatic messages. As soon as these data have been completed they will be sent to you.

[signature illegible].

2.

Chi OKW Berlin, 25/9/39.

Ref: Special monitoring Prague.

To Intercept Station Tennenlohe.

In confirmation of previous telephone message orders are hereby given for special monitoring of the various international transmitters of Prague with other countries. Particular value is attached to interception of traffic with Jugoslavia.

Chi. Berlin, 19/1/40

Ref: Special monitoring Greece.

To Intercept Stn. Lauf, Treuenbrietzen.

Chi/IV for information.

At present it is necessary to monitor Greek wireless traffic as completely as possible, everything sent in Greek by Greek and other stations being of interest.

1) As far as international traffic is concerned, the difficulty is that there are no international transmitters in Greece. Everything which has been intercepted up to date of Greek diplomatic messages comes from pass-on traffics.

The following traffics have, so far, been intercepted by the two intercept stations:

from	to	passed on via
Foreign office Athens	Greek Leg. Berlin	Rome iqu
" " "	" " Budapest	" "
" " "	" " Moscow	Ongar gla
Gr.Leg. Brussels	Foreign Office Athens	Belgrade ytb
" " London	" " "	Stuhlw' burg hat
		- Sofia lzb
" " Moscow	" " "	Sofia lzb
" " Berne	" " "	Belgrade ytb
		Ongar gla
" " Ankara	" " "	Sofia lzs
" " Budapest	" " "	Sofia lzb
		Rome iqu

In addition various traffics of Greek legations between each other have been intercepted.

Experience up to now has thus shown that the Greek diplomatic messages can only be intercepted via pass-on transmitters, the principal ones being Belgrade, Ongar, Rome, Sofia and Stuhlweissenburg. Hence an intensified search should be made in monitoring these (and all other) transmitters for cypher and P/L messages (including private messages) in Greek, e.g. the traffic should be combed for them.

2) Because of the geographical dispersion of the Greek state in a large number of islands separated from each other by long distances there has been for some time an internal Greek wireless traffic, above all between the mainland and individual islands (e.g. Crete) and probably between island and island also.

As we know, this traffic can also be heard in Germany; it is mainly on the medium waveband about 800m. A list of Greek stations with callsigns and wavelengths according to the Berne list is therefore appended. It is not known however if the transmitters included in it are working at the present time. Your receivers are to be put on the desired traffics accordingly and the results of monitoring are to be sent every morning at 0900 hours by T/P to Chi.

Chi. Berlin, 20/1/40.

Ref: Interception of German transmitters.

To Intercept Station Lauf.
" " Treuenbrietzen.

Continued scrutiny of intercept results has shown that both intercept stations have not carried out as desired the interception of German transmitters laid down in the schedule of assignments. This is obviously due to the operators considering the monitoring of German transmitters unimportant.

We therefore point out that this is a fundamental error. As former results of Army intercept stations have shown, the German transmitters Altenburg, Königswusterhausen and Nauen have very heavy traffic with foreign countries. (Up to 30 dipl. messages were intercepted daily). Apart from sending German diplomatic messages, which are not of interest here and which should not be intercepted, these transmitters send on firstly all messages of foreign representatives in Germany which are not sent by land-line. Secondly they are used to a large extent for pass-on traffic, and finally there are the messages coming by line into Germany from foreign countries and then passed on from here by wireless. The last class of messages, which is fairly large, can thus be intercpeted only by monitoring the German transmitters.

It may thus be assumed that careful and regular monitoring of German transmitters will considerably increase the number of messages and that a series of traffic links not yet ascertained (from point of view of addresses) will probably come to light.

You are therefore ordered to monitor the German transmitters regularly as provided for in the schedule of assignments.

The operators are to be instructed according to this letter, and the importance of intercepting messages from German transmitters also is to be made clear to them.

Kempf.

Above all, the interception of the messages between Syria (Puaux) and Paris (Diplomatic Paris) and vice versa is considered of importance. This traffic was sent up to 14/1 with the old callsigns fbh and fld. Since then callsigns have been constantly changed; frequencies are being retained at present.

These are apparently military-diplomatic messages, which are to be intercepted without fail owing to their importance.

Syria (Beirut) m : 23.03 m (13027 kos)
33.53 " (8948 ")
55.92 " (5365 ")

Old callsign for Beirut: fbh (1 or 2)

Old callsign for Paris: fld

Paris frequencies are: 21.50 m (13953.48 kos)

To Intercept Station Lauf

Appended are 2 lists (extract from Berne list) in duplicate with the most important transmitters of the principal countries to be monitored, to be used as data for interception. This list also contains transmitters which have not yet been heard and which are not even known to be active, which must be ascertained by search.

Figures after the frequency column give the place of reception according to the data sent us by the I. Stns. Not yet allocated transmitters are to be added to the lists in red and the completed second copies to be sent us by 15/3/40.

13.

Chi. Berlin 23/4/40

To Intercept Station Lauf.

Owing to its special operation for Husum, the intercept station Treuenbrietzen is ceasing to monitor Bulgaria at present, so Lauf alone is to take over the latter w.i.e. also, as already reported by phone, monitoring of special traffics between England and Norway is to cease, as these traffics are monitored by special Party Husum and I-Station Treuenbrietzen.

Kempf.

14.

Chi V 27/6/40

Ref I-assignments schedule.

To I-Station Lauf.

W.e.f. 1/7/40 previous I-assignment table is cancelled and temporary schedule of assignments as under to be substituted:

Lauf	Treuenbrietzen
Argentine	Afghanistan
Belgium & Colonies	Egypt
Brazil	China
Bulgaria	Denmark & Colonies
Chile	Germany & Protectorates
Finland	Estonia
France & Colonies	Greece
Italy & Colonies	Gt. Britain & Colonies
Netherlands & Colonies	Irak
Portugal & Colonies	Iran
Sweden	Japan & Manchukuo
Switzerland	Jugoslavia
Spain & Colonies	Canada
Syria	Latvia
Vatican	Liberia
United States (U.S.A.)	Lithuania
Remaining States of S.American	Norway
Great Britain. (Motherland)	Palestine
	Poland
	Rumania
	Russia
	Saudi Arabia
	Slovakia
	Thailand (Siam)
	Turkey
	Hungary

15.

Chi V Berlin 25/2/41

Ref: Greek transmitters.
To: I-Stations Lauf, Treuenbrietzen.

The following report is from a reliable source:
"Urgent telegrams Athens/Salonica to Sofia take on the average 2-3 days. Wireless messages from agents of German tobacco firms in Greece go via Empire-Radio, which sends them to Nauen; it is not known whether the messages are sent from Greece via a station of Empire-Radio in England and from there to Nauen, or whether Empire-Radio in Greece has a station which sends them direct to Nauen. At any rate the English are well informed of all sales of tobacco to Germany".

Kempf

16.

Chi V Berlin 27/2/41

To I-Stations Lauf, Treuenbrietzen

Reported from reliable source: "Lithuania and Estonia have closed down their own commerical wireless traffic. The wireless links maintained by them have been transferred to the USSR (Moscow).

17.

Chi V Berlin 10/3/41

To: I-Stations Lauf, Treuenbrietzen

It is reported from reliable source that on 1/3/41 Latvia also has closed down its own commercial wireless traffic and handed it over to the USSR (Moscow).

Therefore the whole of the commercial traffic of the Baltic States Estonia, Lithuania and Latvia is in Soviet hands.

Kempf.

18.

Chi V Berlin 7/4/41
Ref: special monitoring
To: I-Station Treuenbrietzen, to Lauf for information.

A wireless message of 7/4 shows that a wireless link between Athens and Belgrade on 40 m is being prepared

Callsigns: Athens syn
Belgrade cbz

This new link is to be monitored at once and results to be sent to Chi OKW marked "for Gruppe V" in special daily report - in urgent cases by T/P.

Kempf

19.

Chi Berlin, June 41.

To Fixed Intercept Stn. Lauf
" " " Treuenbrietzen

Ref: message interception.

4 enclosures.

A list of callsigns and frequencies which are particularly well heard by another foreign intercept station and continually provide good message material, is appended.

Within your assignments ascertain which of the diplomatic transmitters specified have not yet been heard by you in message or contact traffic. These transmitters are also to be included in your monitoring schedule.

Kempf

20.

Chi V Berlin 14/6/41

To Fixed I-Station Lauf
" " Treuenbrietzen for information

Ref: special monitoring.

W.i.e. wireless traffic Moscow-Ankara and Ankara-Moscow is to be monitored. We are primarily interested in message sent between Haydar Aktay, Turkish ambassador in Moscow, and his government in Ankara.

As data for this special monitoring we append following characteristics:

Callsigns	Frequency	Traffic time	Traffic with:	other frequencies
Moscow				
rae	3705	1 - 4	tae, taf, tag	
ret	3797	1 - 4	"	
	(3901)?			
rka	21·55	34	"	25·66, 26·09
	43·10	1 - 4	"	52·18, 80·43
rkc	19·26			
	30·26	(to date only little traffic with Turkey observed)		
rnn	20·09	1 - 4		
	27·94	34		
	40·00	12		
	58·50	1		
rys	21·49	2		

[2nd page missing].

5/7/41

21.

Ref: message interception

Gruppe IV attaches special value to interception of following messages:

1) American diplomatic messages, specially those with sender Vichy (frequently sent via Switzerland)

2) French Diplomatic messages from the Scandinavian countries (particularly those sent from Sweden).

Particular care should be given to complete interception.

Kempf

22.

Chi V Berlin 11/7/41

I Station Lauf
" " Treuenbrietzen

Below for information are the data given to the Ordnance Dept for construction of rhombus aerials.

When the rhombus aerials are put into service reception should be tested from this data and results reported to us.

1) Gt. Britain:	Dorchester	20.000 kcs	to 6.000 kcs
	Ongar	20.000 "	" 6.000 "
	Oxford	20.000 "	" 6.000 "
	Bodmin	20.000 "	" 8.000 "
	Grimsby	20.000 "	" 8.000 "
Turkey:	Istanbul	13.500 "	" 8.000 "
Jugoslavia:	Belgrade-Rakovice	14.000 "	" 4.000 "

2) I-Station Lauf will be expected to monitor following stations:

Gt. Britain:

Dorchester	20.000 kcs	to 6.000 kcs
Ongar	20.000 "	" 6.000 "
Oxford	20.000 "	" 6.000 "
Bodmin	20.000 "	" 8.000 "
Grimsby	20.000 "	" 8.000 "

Switzerland:

Berne-Münchenbuchsee	20.000 "	" 6.000 "
Geneva-Prangins	19.000 "	" 6.000 "

France:

Lyon	17.000 "	" 5.000 "

A further remark:

If possible a rhombus aerial should be used simultaneously for several transmitters of the same location but with different frequencies. It would be desirable for 4-5 receivers to work simultaneously off one aerial.

Kempf.

23.

Chi V Berlin 18/7/41.

Ref: message interception.

Gruppe IV attaches particular importance to the interception of following messages:

1) Traffic between England and Belgian Congo (Leopoldville). The greatest efforts should be made against the Belgian messages coming from England. gln, gme, gmk, goq have occurred up to now.

These are mostly 4-5/F messages, occasionally mixed with letter groups.

Address for Leopoldville is:

gouverneur general (impersonel)
Leopoldville.

signature: congobelge.

Congobelge is the Belgian office in London.

2) All Rumanian messages, especially from Ankara, Sofia and Rome.

Kempf.

24.

Chi V Berlin 18/10/41

Ref: P/L wireless messages.

With reference to the interception of P/L messages the following new directives are published:

1) In principle, the major effort is to be directed towards encyphered messages.

2) When personnel and sets are available over and above this to intercept more P/L messages than previously, Chi hereby states its agreement.

3) At the present time the monitoring of the following countries is considered specially valuable:

a) Great Britain - America
b) Great Britain - Near East etc.
c) Portugal with its islands
d) Portugal - Great Britain and America
e) Spain with its islands and colonies
f) Spain with Great Britain and America
g) Switzerland with Portugal - Spain - Gt. Britain and America
h) Russia-Iran-Turkey-Afghanistan-America-Japan-China-Manchukuo and Mongolia
i) Croatia (Zagreb) with all countries including Italy (formerly only the traffic with Germany and Spain was monitored)

In the case of the above countries P/L messages of military, political trade and commercial contents are wanted.

4) Interception of P/L messages of all French wireless stations including those of the French colonies and of the De Gaullist movement continue as before to be specially important; here the Wako are interested in contents of military matters besides those of political and commercial affairs.

5) The number of intercepted P/L messages from Gt. Britain and Switzerland dealing with commercial and industrial contents is likewise to be increased if possible as compared with the number at present being intercepted.

6) All P/L messages of purely private contents, family affairs, congratulations etc., are not be be sent in.

25.

Chi OKW 20/10/41

To: I-Station Lauf.

Transmitters which may be affected as to change of callsign or frequency by partial move of Russian government offices and diplomatic corps from Moscow (e.g. Haydaraktay to Kuibichev, formerly Samara) are to be carefully monitored - if necessary in search reception. Changes observed are to be at once exchanged between Lauf and Treuenbrietzen and sent by T/P to Chi OKW Gruppe V.

26.

I-Station Lauf 3/11/(41?)

To: Chi OKW Berlin, Gruppe V.

On 2/11 traffic time 2, Russian international wireless station RKV (Moscow) was observed on 22.84 and 30.69 m in traffic with XTC and JUX.

27.

29. Berlin 22/5/42

Ref: Interception of international wireless traffics.

1) From 23/5/42 Gruppe III takes over responsibility for interception of international traffic of following transmitters:

a)	Oxford	giz	4601m	65.2 kcs	0000-2400 hrs.
b)	Ongar	gla	2950m	101.7 kcs	
c)	München-buchsee	hbb	3130m	95,85 kcs	
d)	Karlsborg	sav	6000m	50 kcs	
e)	Lyon	fyn	15150m	19,8 kcs	

2) Gruppe I has ordered the further interception of the transmitters by intercept stations controlled by it to cease. (a - e = Lauf, a - c = Treuenbrietzen).

3) These transmitters are to be placed instead on the emergency schedule of FSR Stn. Lauf.

4) Supervision of these intercepts will be effected by agreement with Gruppe I. Similarly the mode of logging traffic between Gr. I and III is to be settled.

5) Gruppe IV's requests concerning interception of the above transmitters are in principle to pass via Gruppe I (b), however in as simple as possible form (telephone or memorandum).

6) It is intended on completion of the Intercept Station Ludwigsfelde to allot Gruppe III interception of international wireless traffic of the following transmitters also:

a)	Abu Zaabal (Egypt)	sur	44,25m	6780 kcs	suz 21,72m	13811 kcs
		suy	38,34m	7825 kcs	suu 21,72m	13813 kcs
		sux	38,21m	7851 kcs	suz 21,71m	13820 kcs
			38,20m	7853 kcs	21,70m	13827 kcs
			38,17m	7860 kcs	21,69m	13829 kcs
			38,13m	7867 kcs	suc 21,52m	13940 kcs
			38,12m	7869 kcs	sus 15,26m	19660 kcs
		suv	29,84m	10055 kcs	sup 15,18m	19765 kcs
		suw	25,19m	11910 kcs	14,90m	20135 kcs

Additional for FSR Station Lauf: Ref: 2): you are to cease monitoring the transmitters specified in 1), as these traffics are being monitored by Chi Gr. III w.e.f. 23/5/42.

30.

Chi/I Berlin 1/6/42

Ref: special monitoring of Polish link Lisbon-Marseilles
To: FSR Stn. Lauf.

It is known from reliable source that in period 7-12/6/42 a Polish link between Lisbon and Marseilles is to be tried out. The tx. in Lisbon is in the Polish Embassy; location of the tx. in Marseilles is not known.

Traffic is carried out as follows:

Letter "V" (tuning signal), callsign "DAJ"

Traffic time: 2000-2004 hrs wavelength 6263 kcs
2005-2009 hrs " 5768 "
2010-2014 hrs " 5200 "

This traffic is to be monitored from Lauf and results reported to us.

31.

Chi Berlin 3/6/42

To: FSR Station Lauf.

1) Outstation Madrid has been instructed to cease monitoring the Portuguese wireless stations (homeland) with exception of tx. "cuw" as from 10/6/42. From this date only Lauf is to be responsible for monitoring these transmitters (in Portugal). Transmitter "cuw" will be monitored by both stations as before.

2) To carry out this measure, Lauf will on the same day cease monitoring all Portuguese colonial stations (see Callsign & Frequency List, p.110-111). From then on Outstation Madrid will be solely responsible for monitoring these stations.

32.

Chi OKW 27/6/42

To: FSR Station Lauf

1) As a result of move of Reception Station Chi III from Berlin-Dahlem to Ludwigsfelde transmitters gis, gla, hbb and sav are to be intercepted by you during period 28/6/42 0000 hrs to 29/6/42 2400 hrs.

2) W.i.e. all cypher messages with Jugoslav, Greek and Egyptian diplomatic addresses to and from Cairo are to be intercepted and sent in advance by T/P to Chi Gruppe IV.

Chi OKW

33.

To FSR Station Lauf
" " Treuenbrietzen for information. 10/12/?42

Secret.

Message interception on following lines urgently desired:
1) Belgian messages (mixed groups) from London (GME 1642m) to Leopoldville (OPL). 2) French messages from Peking (FLZ 50.68m) to Vichy (FAQ).

4/9/42

34.

FSR Station Lauf

To: Chi OKW Gruppe Ib, Berlin.

Intercept statistics Spain & Portugal for August 42.

These are arranged according to transmitters and in 10 day periods.

Portugal

Tx.	1. - 10.8.	11. - 20.8.	21. - 31.8.
cud2	96	165	145
cuk2	64	85	80
Cus	2	-	3
cut	28	35	32
cuv2	14	25	14
cuw	66	77	90
cux	2	3	-
cuy	5	6	3
Total	277	396	368

The following increased, compared with first 10 days:

cud 2 increase in messages sent to: Germany, England, Italy Switzerland.

cuk2 " " " " ": England

cuw " " " " ": Port.E.Africa, Port.W.Africa

Spain

Tx.	1. - 10.8-	11. - 20.8.	21. - 31.8.
eaa	13	20	5
eai	17	17	8
eam	-	9	1
eam2	49	61	80
ean2	1	-	-
eaq	9	12	32
eav	14	25	12
eax	-	2	-
edz	1	2	1
Total	104	148	139

Increases compared with first 10 days:

eam2 increase in messages sent to: Germany, U.S.A.

eaq " " " " ": England, Canaries

eav " " " " ": U.S.A.

An increase, if it existed, in traffic with England could not be ascertained, as the larger part of the English messages according to the address list were not intercepted and therefore not listed. A clearer picture may possibly be obtained from Treuenbrietzen's interception of the traffic the other way, England-Spain or Portugal.

35. -/12/42 ?

As a trial all stations of Portuguese colonies (Atlantic, West and East Africa), Belgian Congo, Brit. Sierra Leone and Rhodesia (callsign and frequency list p.p. 8-9,58,59,110,111) are to be monitored for period 14/12 0000 hrs - 16/12 0000 hrs and results and reception conditions reported to us.

Chi OKW

36.

28/12/42

To: Fixed Station Lauf

On 1/1/43 following changes in assignments schedule come into force: 1) Sweden: Treuenbrietzen is to take over all short and long wave transmitters. Lauf continues to monitor long wave transmitters saw, saq, saj, except sav. Stuermer retains all short wave transmitters. sav is retained by Chi Gr. III B.
2) British Rhodesia and Belgian Congo will no longer be monitored by Stuermer (district) but by Lauf.

Chi OKW

4780 kcs 4720 kcs.

Traffic times not known.

39. O.U., 4/3/44

Outstation Freya

Result of test of reception conditions carried out according to Chi E 14a (I) No.383/44 of 1/2/44

Special monitoring was carried out for period 17/2 to 29/2/44.

All the transmitters given us for testing were heard here either not all or very badly. Some Japanese transmitters can be heard very loudly here. It is impossible to take messages however as the stations suffer badly from fading and echo.

Afghanistan Kabul

The transmitters could not be heard on the day of trial monitoring.

French stations Shanghai

Transmitters ffz4, 43.02 and ffz5, 37.00 were not heard here during trial monitoring. Both stations had already been monitored since 27/1/44. During this period it was never possible to hear the stations well. Satisfactory message interception could not be obtained.

Nanking China Shanghai

Of the transmitters allotted for monitoring only xcb, 21.69m and xgh, 37.53m could be heard. xcb was heard here with qsa 2-3. Tone and legibility good, perfect interception however not possible here during the whole day, a telegraphy transmitter interfering for several hours. xgh, 37,53m comes in with qsa 1-2. Perfect interception not possible here owing to fading.

Chungking China Chungking

Xgr, 26.00 was heard with qsa 1-2, and xgz1, 37.21m with qsa 3-4. While the former could not be intercepted at all, the latter could only be intercepted for periods, in spite of its good signal strength, because of echo effects.

Japan:

In this case primarily the transmitters mentioned in para. 5 were monitored. Only one station, jna, could be heard. With the exception of a few minutes about 2000 and 2100 hrs, jna had strong interference during its transmission. We were able to ascertain that Etat messages were being sent, but interception was not possible. All other Japanese transmitters heard here were just as unfavourable for interception. In some cases signal strength was good. But even here fading and echo effects cropped up and prevented satisfactory interception. Often the sending of Etat messages could be recognised by ear, the signals however were not recorded by the recorder in legible form. During the whole test period only 3 messages good enough to send in were obtained.

To sum up we state that results of the test monitoring were completely negative.

signed. Drescher.

40.

Chi Berlin 28/6/44

To FSR Station Lauf
" " Treuenbrietzen

Subject: Addition to the Plan of Intercept Duties.

Abyssinia is included in the monitoring sphere covered by Lauf, with immediate effect.

The transmitters (location - Addis Ababa)

eta	48.43m	ete	22.87m
etb	43.34m	etf	21.67m
etc	32.57m	etg	19.42m
etd	28.23m	eth	17.37m

are to be covered. All Abyssinian diplomatic messages to and from Addis Ababa and Moscow are to be intercepted until further notice and they are to be forwarded to Gr. IV.

41.

Chi I (Ib) 30/6/40

To FSR Stn. Lauf.

The following data learned from a sure source via the Spanish wireless traffic "Compania Telefonica" are sent for information:

Transmitting station: Pozuelo del Rey (Madrid), telephone 467.

1 20/60 KW-generator-transmitter type Standard, which can transmit on all frequencies between 14 and 60m and is at present used for traffic with America.

1 20 KW transmitter with similar technical data, used for traffic with Europe.

1 tx. of 1 KW, Type M13, which can work from 13-100m and is at present used for traffic with Europe.

2 500 watt transmitters, type M11, installed for 40-100m and used for traffic with Europe and Africa.

Aerials:

1 rhombus aerial, aligned for New York
1 " " " " Buenos Ayres and Rio de Janeiro
1 " " " " Venezuela
1 " " " " Berlin
1 " " " " Berne (Switzerland)
1 " " " " Tenerife
1 " " " " Melilla
1 sterbo aerial, " " Canaries (only for working on 28m)

Receiving Station: Grinon (Madrid), tel. 465.

Sets: 2 receivers type Standard, rather old but excellent
1 " " " " " inefficient
5 very modern Hammerlund Super-Pro.

Aerials:- aperiodic rhombuses just like those of the transmitting station.

Head Office: Gran Via, telephone 231, 450, 470.

4 control stations equipped with instruments to exclude echoes and transformers of 3000 and 6000 periods.

The stations are each connected with the head office by 6 lines, 2 of them automatic (465 and 467).

Personnel:

Pozuelo: 1 station head (Juan Cabrero)
6 specialists

Grinon: 1 station head (Pedro Paez),
2 specialists.

Head Office Gran Via: 1 director (Alfredo R. Crespo)
10 specialists.

Normal and daily traffic times:

America	New York	14 - 22 hrs	(official timetable)
	Buenos Ayres	1430-21 "	" "
	Rio de Janeiro	15-17 "	" "
Europe	Berlin	9-21 hrs.	
	Berne	9-22 "	
Africa	Tenerife	9-21 "	
	Melilla	9-13 "	

Other wireless traffics of Telefonica:

Ceuta to Algeciras: two wireless lines exist between the places named, one of them being extended to Madrid (from Algeciras to Madrid the line is connected to the telephone line). Both lines work on ultra short wave.

Ceuta to Malaga: 1 wireless line on VHF.

Malaga to Melilla: 1 " " " "

Barcelona-Palma de Mallorea: 1 line on VHF

Palma to Ibiza: 1 line on VHF

Palma-Mahon: 1 " " "

Tenerife-Las Palmas: 1 line on VHF

Las Palmas-Lanzarrote: 1 line on VHF

All these VHF lines are of very low power (1 watt maximum). Traffic is on 5m band without use of transformers.

Times and frequencies used in traffic with New York:

Times: from 14 to 16 and 19 to 23 hours.

Madrid	EDN	20890 kcs	= 14.38 m	(little used)
"	EDS	14985 "	= 20.02 "	(normal working freq).
"	EHY	10070 "	= 29.79 "	(night)
"	EDO	6480 "	= 46.30 "	(night; winter)
New York	WOA2	18930 "	= 15.85 "	(little used)
"	WOT4	13370 "	= 22.43 "	(normal)
"	WOA4	10515 "	= 28.50 "	(night)
"	WOT	5052.5 "	= 59.39	(night; winter)

Buenos Aires: times 1430 - 2100 hrs.

Madrid:	EDN	20860 kcs	= 14.30 m	(normal)
"	EDM	19030 "	= 15.76 "	(normal, alternating with first as required owing to interference or fading)
"	EDP	14620 "	= 20.52 "	(night)
"	EDY	10070 "	= 29.79 "	(night)
Buenos Aires	LSM3	19140 kcs	= 15.67 m	(normal)
	LSL4	21160 "	= 14.18 "	(normal, alternative)
	LSM4	21280 "	= 14.10 "	(" ")
	LSL3	15810 "	= 18.98 "	(night)
	LSK3	10250 "	= 29.27 "	(")

Rio de Janeiro: times: from 15-17 hrs.

Madrid uses the same frequencies as in traffic with Buenos Aires.

Rio de Janeiro	PSA	21080 kcs	= 14.23 m
"	PSB	19010 "	= 15.78 "
"	PSF	14690 "	= 20.43 "
"	PSC	10760 "	= 27.89 "
"	PPD8	18600 "	= 16.12 "

Berne: times: from 9-23 hrs.

Madrid	EHY	10070 kcs = 29.79 m	(normal)
"	EDP4	5310 " = 56.48 m	(night)
"	EDY3	5750 " = 52.17 m	(")

Berne	HET4	10395 kcs = 28.86 m	
"	HEO4	10338 " = 29.02 "	
"	HET2	5390 " = 55.50 "	
"	HET2	5400 " = 55.56 "	

RADIAR: The offices are in the Gran Via in the Adriatica buildings.

Transmitter: is in suburb Vallecas. There is only a 20 KW tx., installed only for telegraphy and for frequencies of 14-30m.

Aerials: there is only a directional aerial to Buenos Aires. There is also a non directional testing aerial for traffic with ships at sea.

Receiving station: set R.S.A. in Chamartin de la Rosa.

Traffics: telegraphy with Buenos Aires from 13 hours until early morning.

Traffic for the whole of America is accepted, but only on the line Buenos Aires. Telegrams are passed on from there by by other services.

This company has made direct trials with New York, but has no sanction for this traffic.

TRANSRADIO: head office in the Calle Alcala, in buildings of Banco de Vizcaya.

Transmitter: Company has several tx., but only one of 20 KW, installed for telegraphy and telephony.

The other tx. for telegraphy have been built locally and are from 1-4 KW.

Aerials: many aerials of all types and directions exist.

Traffics: all over the world, on telegraphy; some direct, such as the traffics with Argentine, New York, the Canaries, Berlin, London etc. Other traffics are sent from the points mentioned as graded multiple [gestaffelt].

Combined traffic with the state telegraph service (telegrafos) is accepted.

ITALCABLE: Italcable has recently introduced certain traffics to fill in the gaps caused by the cutting of submarine cables; however only the link Barcelona - Rome is krown today, and it is not known whether any traffic is passed on it at present.

42.

Teleprint 30.8.44 1745

To FSR Station Lauf.

It is reported by a reliable source that wireless traffic takes place from the Turkish Legation in Bulgaria to Ankara on the following frequencies:

uzl de kok 6750 kcs 0800, 1000, 1600 German Summer Time. qrh 10 = 7170 kcs.

mur de kxx 7170 kcs 0920 German Summer Time qrh 12 = 4250 kcs

mur de yuk 4250 kcs 1000, 1600 German Summer Time qrh 42 = 6750 kcs

Diplomatic messages are apparently transmitted. The traffic is to be covered by you and the results are to be reported.

OKW Chi

43.

FSR Str. Treuenbrietzen 16/11/44

Treuenbrietzer.

To: Chi OKW Gruppe I, Berlin
" FSR Station Lauf for information.

Ref: R/T traffics

In the following report the station gives traffic characteristics and further details of R/T traffics monitored by it since about the middle of October, 1944, on the following lines:

a) Berne - Vienna and vice versa
b) London - Poland
c) Poland - London.

a) R/T traffic Berne - Vienna and vice versa.

1) Wavelengths and transmitting times:

1200-1215	hrs	on 47.28m
1345-1400	"	" 32,66"
1845-1900	"	" 47.28"
2315-2400	"	" 47.28"

Traffic at 2315 hrs is previously announced at 1200 or 1345 hrs ("the traffic will be continued this evening at 2315 hrs"). Traffic always takes place at the times given. There is no traffic on Sundays.

2) Types of messages and speech peculiarities

The transmissions are sent by a Swiss short wave transmitter and are spoken in part by the same announcer as in the normal transmissions of the Swiss short wave station.

5/F messages exclusively are read, some in French, some in German. Sometimes a womans voice gives the transmissions.

In his broadcast transmissions the announcer says:

"ici radio suisse lausanne" or

"ici la suisse genf" and "ici suisse berne".

Occasionally the transmissions go out simultaneously on both wavelengths.

The numbers in French are often spoken with a strong English accent. Delivery slow.

3. Addresses occurring

204, 205, 210, 240 (204 is the most frequent).

4. Commencement of traffic and message transmission

Traffic commenced by a continuous note, then follows announcement: "Hallo, hallo, un message pour 204" or

"Achtung, achtung, eine Meldung für 204".
or "Attention ! Attention! Nous avons un message pour deux cent quatre !"

Each message is repeated when completed. Transmissions in French predominate.

At conclusion of traffic the same continuous note as at the beginning is used.

5. Reception conditions

Medium signal strength of a normal R/T transmitter, frequently some fading. At the 2315 hrs transmission regularly jammed by powerful R/T tx., which frequently blots out reception so that interception is scarcely possible.

b) R/T traffic London-Poland

1. Transmitting times and wavelengths

10 - 1015	on	41.55 m
1200 - 1215	"	41.20 m
1400 - 1415	"	41.55 m
2000 - 2015	"	49,55 m

2) Types of messages and speaking peculiarities

5/L messages are sent in English. The message preamble contains:

time of origin,
"number of words",
date, an indicator number in serial order such as 353, 354 etc., for example. The messages are read by means of the English alphabet, e.g.

a for able
g for george
f for fox
d for dog
j for johnny

words in P/L frequently occur between the 5/L groups, such as "important, to, most, hardly" etc.

3. Commencement of traffic and addresses

The announcer calls:

"Hallo, hallo, jo jo, thabu and lo lo. I have one, (two, three, etc., according to no of messages) messages".

Addresses: "message for lo lo 27 and 73"
"message for thabu"
"message for jo jo".

There are thus three different addresses. If there is no message for an address, the announcer says: "I have no messages for thabu".

The transmission is always preceded by an interval signal.

4. Signature and conclusion of traffic

At end of traffic the following phrases are used: "all the messages come from Jack", also "and this is the end of the message for lo lo", and to conclude: "The transmission is finished."

This is a British broadcast transmitter of the BBC with normal signal strength, occasionally fading. Specially at evening transmission interfered with by powerful jamming transmitter.

c) R/T traffic Poland - London

This Polish tx. is probably the opposite number of the English tx. appearing in London - Poland traffic.

1. Transmitting times and wavelengths (observed up to now)

1130 - 1230 (1300) and
1700 - 1830 (1900) 35.35 m.

2. Types of message and speech features

3/F messages are sent in Polish. Each message is repeated. Preamble:

"Hallo, 40 wiadomosc nr... data... group ..."
then follow 3/F groups.

3. Commencement of traffic

Each transmission is preceded by a musical interval signal. Then the announcement:

"Uwaga, uwaga, tu rozglosna wawel" ("hello here is Station Vavel").

As "Vavel" is the same as one of the Polish partisan slogans, the traffic is suspected to be with a central group of Polish partisans. It could also be however that this transmitter is in Lublin (location of Polish pro-Soviet national committee) or in some other Polish town occupied by the Russians. However at present there is no confirmation of either suspicion.

After the announcement follows:

"Zadajymy wiadomosci dla 52 i 40 (we give transmissions for 52 and 40).

Signature and conclusion

The end of each message is given by "koniec wiadomsei" (end of transmission).

The final conclusion of the whole transmission is given by a few Polish gramophone records. There is no time given for resumption of traffic.

5. Reception conditions

Tone clear, speech distinct, qsa 3.

As already mentioned, it is only a hypothesis that this is the opposite number of the British transmitter, based or an observation of the wireless operator that the British transmitter at the end of traffic at 1015 hrs said in English "I await your traffic and message transmission in 30 minutes".

The operator accordingly searched for the answering station and found the Polish transmitter on 35.35 m.

Should any alterations in procedure of the R/T traffics described above occur, or should any fresh facts be ascertained, they will be reported.

---

Enclosed are the wireless traffic instructions for wireless traffic Freya Gr., III. Exact date for beginning operation of Freya transmitter will be communicated later. FSR Station Lauf and Treuenbrietzen are to monitor this traffic and report reception conditions to this end by phone.

As soon as the transmitter has been set in readiness to operate in Lauf and Treuenbrietzen, a report to this end should be made, so that the reception and transmission trials can be ordered and carried out immediately.

You will be informed later of the cypher instructions to be used.
